FOR IMMEDIATE RELEASE

Austin, TX – May 1st 2017

Hygieacare to present new data at Digestive Disease Week® 2017 in Chicago

Posters to be presented showing: Economic Dominance of HyGieaCare Prep System over standard split-dose PEG; Effective, well-tolerated and low-risk alternative to oral prep; minimal hydrostatic pressure effect on the colon and significantly decreased risk of barotrauma pressure-induced injury

AUSTIN, TX, May 1, 2017– HyGieaCare today announced that three posters will be presented at the upcoming Digestive Disease Week (DDW). DDW 2017 is scheduled to be held at McCormick Place in Chicago, IL, USA, from 6th to 9th May, 2017, and is expected to be attended by more than 15000 professionals including Gastroenterologist and hepatologists from all over the world. Hygieacare will be exhibiting at booth #3311 throughout the conference.

Following are the posters to be presented:

1. Availability of a safe, cost-effective high volume rectal infusion based colon cleansing method of staggering economic burden of inadequate bowel preparation calls for a paradigm shift in the current recommendations for bowel preparation for colonoscopy – by Ananya Das MD, Pradeep Bekal MD, William Stassen MD, Elizabeth Odstrcil MD, David Johnson MD

   Results: In the baseline analysis, the strategy of using standard preparation was dominated by the Hygieacare® strategy, which was less expensive ($14,973 vs. $18,847) and yielded higher quality adjusted life years (13.401 vs. 13.036) per person. The difference was even more significant when indirect costs were considered. In a Monte Carlo simulation trial, over the life time of the study cohort, total life time cost saving was a staggering $150,064,650.

   Conclusion: The HyGieaCare® strategy is dominantly cost-effective compared to current regimen of ingesting large quantity of liquid cleansing solutions of low palatability.

**Results**
Of the 1,727 consecutive patients who had a colon irrigation prep at the HyGIeaCare Center in Austin, TX, between November 2015 and November 2016, 1,670 (97%) of the patients were rated as adequate or had a BBPS ≥ 5 which has been shown to be significant in the detection of polyps. There have been no severe or serious adverse events reported to date. 88% of patients reported no symptoms.

**Patient Satisfaction remains high as 95% of the patients** (N=1,717) recorded on their follow-up questionnaire that they preferred the colon irrigation prep over the oral prep prior to colonoscopy.

**Conclusion**
The colon irrigation preparation continues to be an effective, well tolerated low-risk alternative to standard oral prep prior to colonoscopy.

3. Comparison of intraluminal pressure with (HygieaCare “open system”) Colon Irrigation Versus Standard Colonoscopy – by Harish Gagneja MD, Parth Parekh MD, Dawn Burleson RN, David Johnson MD

**Results:** 45 simulations showed that pressures from flow of water does not exceed 1.2psi – well below the upper limit for safety of 1.55 psi found in human cadaver studies.

**Conclusions:** The colon irrigation preparation is a novel alternative for colonic cleansing prior to colonoscopy. The hydrostatic pressure effect on the colon is minimal, and thus there is a significantly decreased risk of barotrauma pressure-induced injury as demonstrated.

“HyGIeaCare is presenting a growing body of data supporting the transition to HyGIeaCare Prep,” said Gavriel (Gabi) Meron, Chairman and Chief Executive Officer, HyGIeaCare Inc. "HyGIeaCare Centers are operational in Austin TX, Phoenix AZ, Norfolk VA, Dallas TX and Cincinnati OH. New Centers are being built out in Jackson MS and Miami FL. We look forward to further expansion both nationally and globally."
Hygieacare will be exhibiting at booth #3311 throughout the conference, and will have information available about the Hygieacare Centers for discussions about opening HyGIeaCare Centers with Gastroenterologists and Hospital/Medical Centers.

**About Digestive Disease Week**

The DDW 2017 will be attended by over 15000 hepatologists and gastroenterologist from across the nation and around the world who will gather in Chicago, IL, USA, to exchange the latest information on hepatology, gastroenterology, and gastrointestinal surgery, and also to interact with fellow professionals at this must-attend event.

The Digestive Disease Week, i.e. DDW 2017, is scheduled to be held at McCormick Place in Chicago, IL, USA, from 6th to 9th May, 2017, and is expected to be attended by more than 15000 professionals including Gastroenterologist and hepatologists from all over the world. More information can be found at www.ddw2017.org.
